

Lesson: Waterfall-type legumes can be planted at the top edge of the terrace wall and grow down the wall to maximize usage of the vertical surface area.

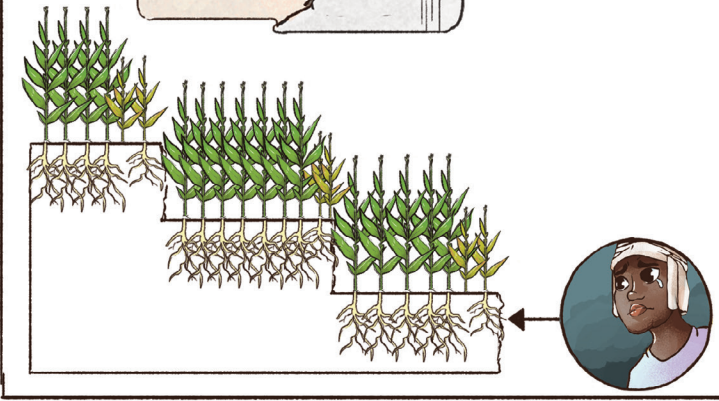

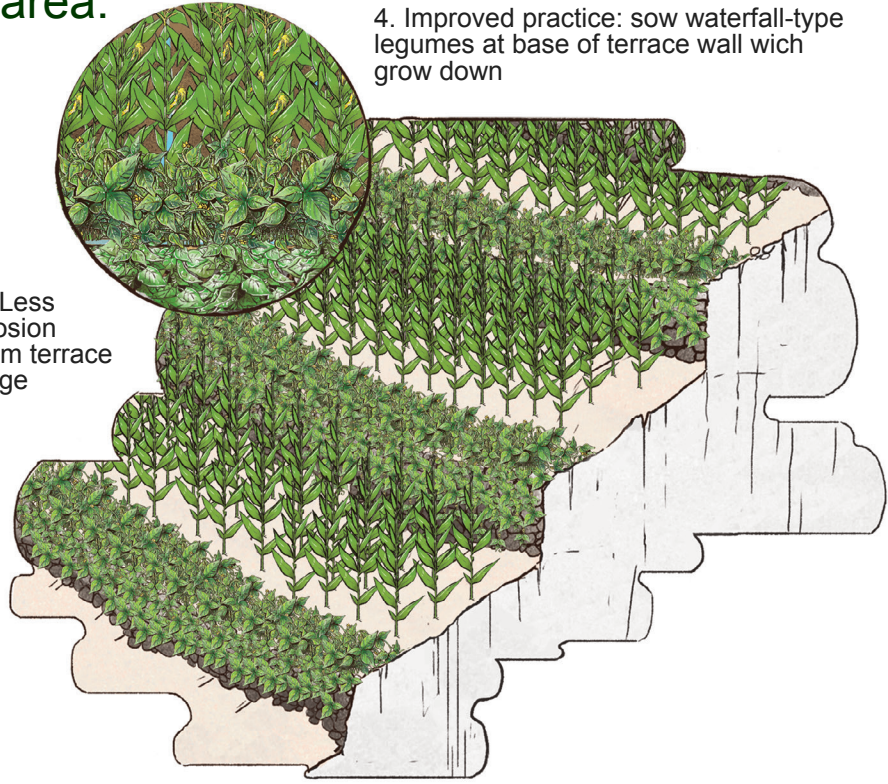

2. Soil erosion at terrace edge

1. Traditional practice: maize or other large crops at terrace edge are stunted

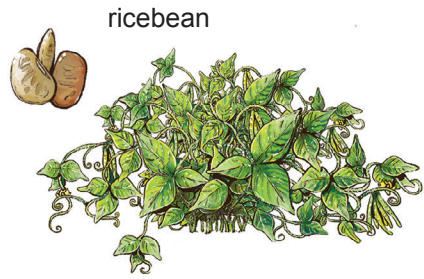

4. Improved practice: sow waterfall-type legumes at base of terrace wall which grow down

5. Less erosion from terrace edge

3. Traditionally, low yield near terrace edge

6. Terrace wall and edge are better utilized
