

Lesson: Manure made with the help of worms can be an alternative to livestock manure or synthetic fertilizers for home gardens

1. Traditional sources of livestock manure or synthetic fertilizer may not be available or expensive

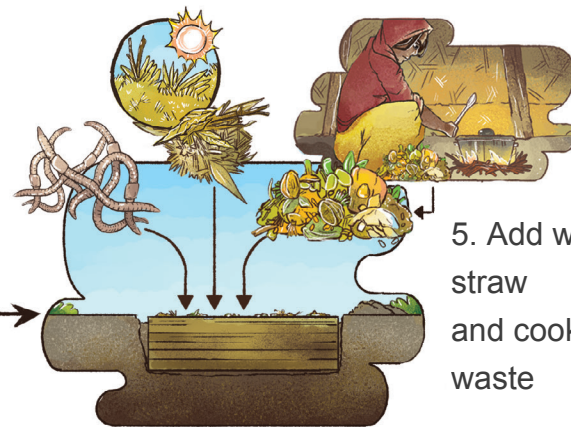

2. Low yields

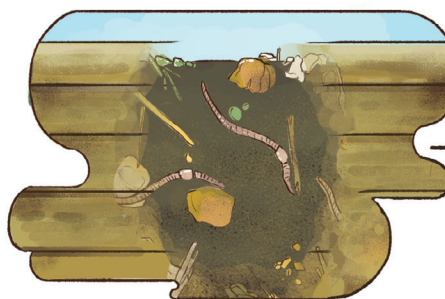

3. New practice: dig pit and add wooden box

4. Collect earthworms after rain

5. Add worms, straw and cooking waste

6. Time passes

7. Worms will eat straw and waste and convert to manure

8. Add worm manure, high yields
