

Lesson: Instead of spraying chemical pesticide or biopesticide in the field, it is less expensive and less labour to initially remove pests and disease from seeds before sowing, using salty water.

1. Problem: vegetables damaged by pests and disease

2. Partial solution: soak seeds for a few minutes in very salty water.

3. Rinse with non-salty water

4. Sow seeds

5. Healthier plants

6. Be careful, excess concentration or time of salty water will kill seeds. It is recommended to try different dilutions and durations of the treatment, and then sow the seeds to ensure germination is not reduced.
