

# Lesson: New tools from vendor to remove maize seeds from cob

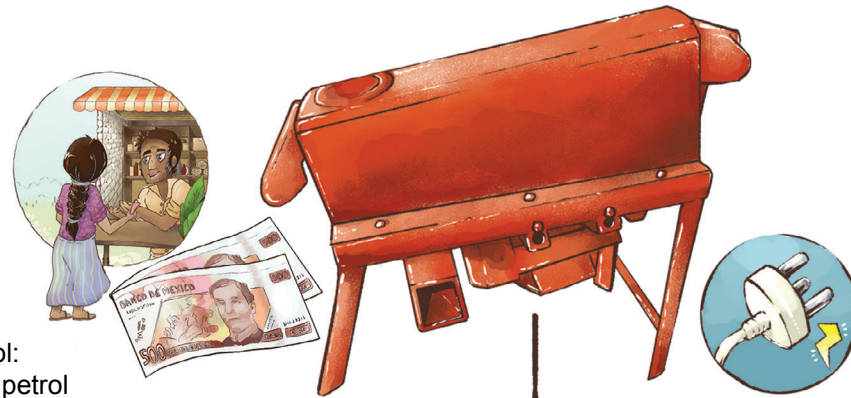

1. Traditional practice

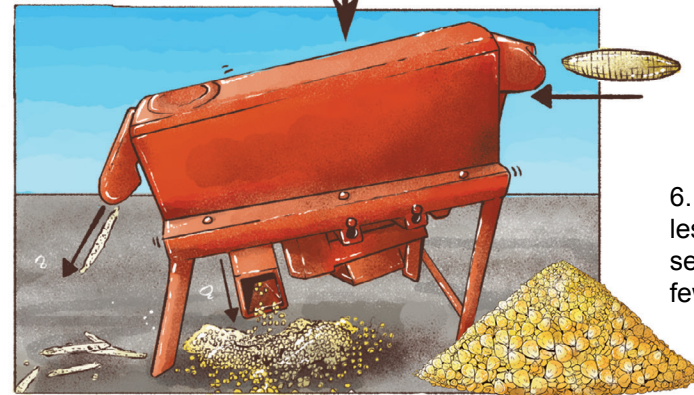

2. Painful

3. Damages seed and cobs which allows more disease during seed storage which can produce toxins. Also, if these seeds are sown, germination may be low

4. New tool: electric or petrol maize sheller from vendor

5. Simply insert cobs into machine

6. Improved germination, less disease when these seeds are sown and fewer toxins when eaten

7. Owner can rent machine or offer service for a fee as a small business opportunity
