

Lesson: Rather than applying all fertilizer in a single dose, splitting the doses will reduce the amount of fertilizer required

1. Traditional practice of applying fertilizer in a single dose

2. Plants are small and will not absorb fertilizer

3. Money wasted, lower yield

4. Improved practice is initially apply only 1/2 or 1/3 bag of fertilizer

6. All fertilizer is absorbed

5. At a later stage, apply remaining fertilizer

7. High yields with less fertilizer and hence less money
